WELCOME TO TECHKRATIERS

About TechKratiers

TechKratiers is a leading IT training institute dedicated to empowering students and professionals with industry-relevant technical skills. We specialize in delivering high-quality training programs in Python Programming, Full Stack Development, Artificial Intelligence, Machine Learning, Data Science, Digital Marketing, UI/UX Design, Graphic Design, and other emerging technologies.

Our mission is to bridge the gap between academic education and industry requirements through practical learning, expert mentorship, real-world projects, and career-focused training. We believe in developing skilled professionals who are ready to excel in today's competitive technology landscape.

AI-POWERED PYTHON FULL STACK DEVELOPMENT PROGRAM

Program Overview

The AI-Powered Python Full Stack Development Program is a comprehensive professional training course designed for students and aspiring software developers. The curriculum combines Python programming, web development, databases, data science, machine learning, and artificial intelligence to prepare learners for modern IT careers.

The program follows a practical learning approach with assignments, real-time projects, and portfolio development, ensuring students gain both theoretical knowledge and industry-ready skills.

Course Objectives

- Develop strong programming fundamentals using Python.
- Build modern web applications using Django.
- Learn database design and SQL programming.
- Perform data analysis using NumPy and Pandas.
- Understand machine learning and AI concepts.
- Build industry-level projects.
- Prepare students for technical interviews and placements.

Program Curriculum

Module 1 – Python Fundamentals

Learn the core concepts of Python programming including variables, data types, operators, control statements, loops, functions, and object-oriented programming. This module establishes a strong programming foundation.

Module 2 – Advanced Python

Explore advanced Python concepts such as file handling, exception handling, modules, packages, decorators, and the Django framework for developing scalable web applications.

Module 3 – NumPy & Pandas

Understand data analysis using NumPy and Pandas. Learn array operations, data cleaning, filtering, transformation, aggregation, and efficient handling of structured datasets.

Module 4 – Data Visualization

Learn to visualize data using Matplotlib and Seaborn by creating professional charts, graphs, dashboards, and reports for effective data communication.

[Document title]

Module 5 – SQL Database

Master SQL fundamentals including database creation, CRUD operations, joins, normalization, constraints, relationships, and analytical queries.

Module 6 – Statistics & Data Analytics

Understand probability, statistical distributions, descriptive statistics, hypothesis testing, correlation, and analytical techniques used in data science.

Module 7 – Machine Learning

Learn supervised learning, regression, classification, model training, evaluation techniques, feature engineering, and predictive analytics using real-world datasets.

Module 8 – Artificial Intelligence

Study the fundamentals of Artificial Intelligence, neural networks, deep learning basics, intelligent automation, and practical AI applications across multiple industries.

Module 9 – Real-Time Projects

Develop industry-oriented projects involving Python development, data analytics, machine learning, AI-based applications, and portfolio creation to gain practical experience.
